Geekus Maximus : Horror Stories From A Computer Tech before purchasing it in order to gage whether or not it would be worth my time, and all praised Horror Stories From A Computer Tech:

3 of 3 people found the following review helpful. Fact is Stranger than FictionBy Jada RykerHorror Stories From A Computer Tech, by Geekus Maximus, is a fun collection of stories from the perspective of the computer technician.The stories remind me of a Christmas several years ago, when I worked in a hospital. One of the patient

care units insisted on a computer technician leaving the information technology building and hiking some distance through snowy city streets in order to get their printer to print. The poor tech finally made back to his building, numb and near hypothermia. The tech had avoided frostbite via the heat of his righteous indignation. The printer was turned off. The tech turned it on. It was still printing its backlog when he headed back out into the snow. This is a short, fun read. After you read it, ask yourself: Do you feel the pain from the computer-tech perspective, or the user perspective? 0 of 0 people found the following review helpful. I expected fiction horror, but this is nice too. By Customer This book contains 7 true stories which could be called "an hour or three in the life of a computer technician". Clients call this guy to set up their home wireless, fix email, remove a virus, or whatever, and some of them turn out to be slightly funny. Or creepy. Or both. Each story is a page long, if you're reading on a PC. Some of these stories contain a seed of an idea for an actual horror story, like, for example, the email conversation with a daemon. This book could do with some descriptions, even made up ones, because now it's a bit bland. Also, I noticed a couple of typos and one weirdly constructed sentence. Disclaimer: I think I got this book for free, if I remember correctly. There was some kind of challenge on Konrath's blog and a bunch of book links in the comments. I picked those that sounded interesting, but only if they were free. 1 of 1 people found the following review helpful. Common sense computer tech. By Cire6407 The author of the group of essays writes about his experiences as a computer in home technician. The stories are very amusing and some shocking to hear. A truly enjoyable read.

Seven true stories about the craziest, creepiest, and funniest customers I've ever met as an in-home computer technician. Read them at your own risk...
