C. A. Brebbia : Sustainable Irrigation Management, Technologies and Policies III (Wit Transactions on Ecology and the Environment) before purchasing it in order to gage whether or not it would be worth my time, and all praised Sustainable Irrigation Management, Technologies and Policies III (Wit Transactions on Ecology and the

Environment):

This book contains most of the papers presented at the Third International Conference on Sustainable Irrigation, Management, Technologies and Policies, held in Bucharest, Romania in June 2010. The conference was organized by the University Politehnica of Bucharest and the Wessex Institute of Technology of the UK, with the collaboration of the European Society of Agricultural Engineers and the International Commission of Agricultural Engineering. The series of biennial meetings provides a venue for an international presentation and dissemination of papers related to achieving efficient, equitable and sustainable use of water resources in irrigation. The book will be of interest to irrigation and water resources engineers, scientists, and managers in government, industry, and academia who are involved with sustainable water use and irrigation.
