Tim Hibsman : Tactical Underwater Command before purchasing it in order to gauge whether or not it would be worth my time, and all praised Tactical Underwater Command:

Tactical Underwater Command is a CD-ROM cartoon book that takes a humorous look at sea creatures. Everyone always assume fish are stupid. Who says? They just want you to think they are stupid. They outnumber humans. They mind their own business. They don't pollute land. They welcome most visitors to their environment. After years of abuse and being treated poorly by humans, they have had enough. They are ready to fight back. They have compiled their battle plans to take back the planet. Take a humorous and cartoon look at our underwater friends.

About the Author Tim Hibsman is a communications professor in Southern California. Tim has always been fascinated with how people immediately assume fish are so dumb. Who says? They have had enough of the poor treatment and they are ready to retaliate.
