Gregg R. Gillespie : Tasty Treats for Demanding Dogs before purchasing it in order to gage whether or not it would be worth my time, and all praised Tasty Treats for Demanding Dogs:

2 of 5 people found the following review helpful. RECIPES WITH TOXIC INGREDIENTSBy Sharon L. OlsenI purchased this book, excited about the prospect of making something my dogs would love.However, in reading some of the recipes I have found that this man likely knows very little about dogs and potential ingredients that can cause toxicities in our pets. While he does have a section that references potential toxicants, at least eight of his recipes contain garlic, which he has even listed as a potentially toxic food.Lucky for me, my daughter is a veterinarian and was astute enough to point this out. Garlic can cause extreme illness and even death if eaten over a prolonged period of time, even at low doses. DOGS SHOULD NOT EAT GARLIC. It does not matter the breed of the dog (as he says). Some dogs (just like people) are more sensitive to certain ingredients than others--regardless of the breed, and we don't necessarily know which dogs those will be.As the ASPCA poison center says on it's website-- Garlic does have toxic potential to pets, and is generally more potent than onion, also a member of the Allium species, in causing changes in red blood cells in dogs and cats. This is true in raw, cooked or powdered forms. Even at low levels of exposure to garlic, some change in red blood cells is likely; it is typically only when a significant number of red blood cells are

altered that their oxygen-carrying capacity is noticeably compromised and clinical signs develop. Generally, it takes either a fairly large single ingestion or chronic exposure. These effects are also somewhat more likely to be seen in cats, as their red blood cells have shorter life spans and they're more likely to have bone marrow issues. However, the possibility exists that some dogs may also be genetically more susceptible to problems from garlic ingestions. Plain and simple, DO NOT BUY THIS BOOK. He might make great soups and cookies but clearly knows little about animals

You cook for yourself. You cook for your family. You cook for your friends. Don't ignore the most faithful and loving of your companions! Recipes for 72 delectable canine repasts will have you dishing up tasty, healthful treats such as bacon drops, cheese biscuits, even beef jerky in little time--and at a fraction of the cost of commercially prepared dog food. Following his motto, "I will not put into your dog anything that I would not put into my own children," the author includes only nutritious ingredients that appeal to a dog's senses of taste and smell, and most importantly, eliminates those that can be harmful (unlike, surprisingly, other dog-food cookbooks). So, stir up some Dobis for your Doberman, some Beef Your Babies for your Basset, some Woof Balls for your Wiemeraner--and set your best friend's tail wagging with delight as he savors the results.
